

A smart start with solar and battery storage

ZenSolar is a solar company that designs systems in house and fits FoxESS and Sigenenergy inverters and batteries. SigenStor Neo is made by Sigenenergy for homeowners starting out.

One neat unit for your home

SigenStor Neo is one connected unit. It brings the essential parts together in a single stacked unit.

No separate gateway box needed. That job is built in.

Finding the right size for your setup

The battery comes in two module sizes, about 6 kWh and about 7.5 kWh. You can stack 1 to 6 modules on one unit.

Single phase version

- 2.5 to 12 kW
- 4 solar inputs

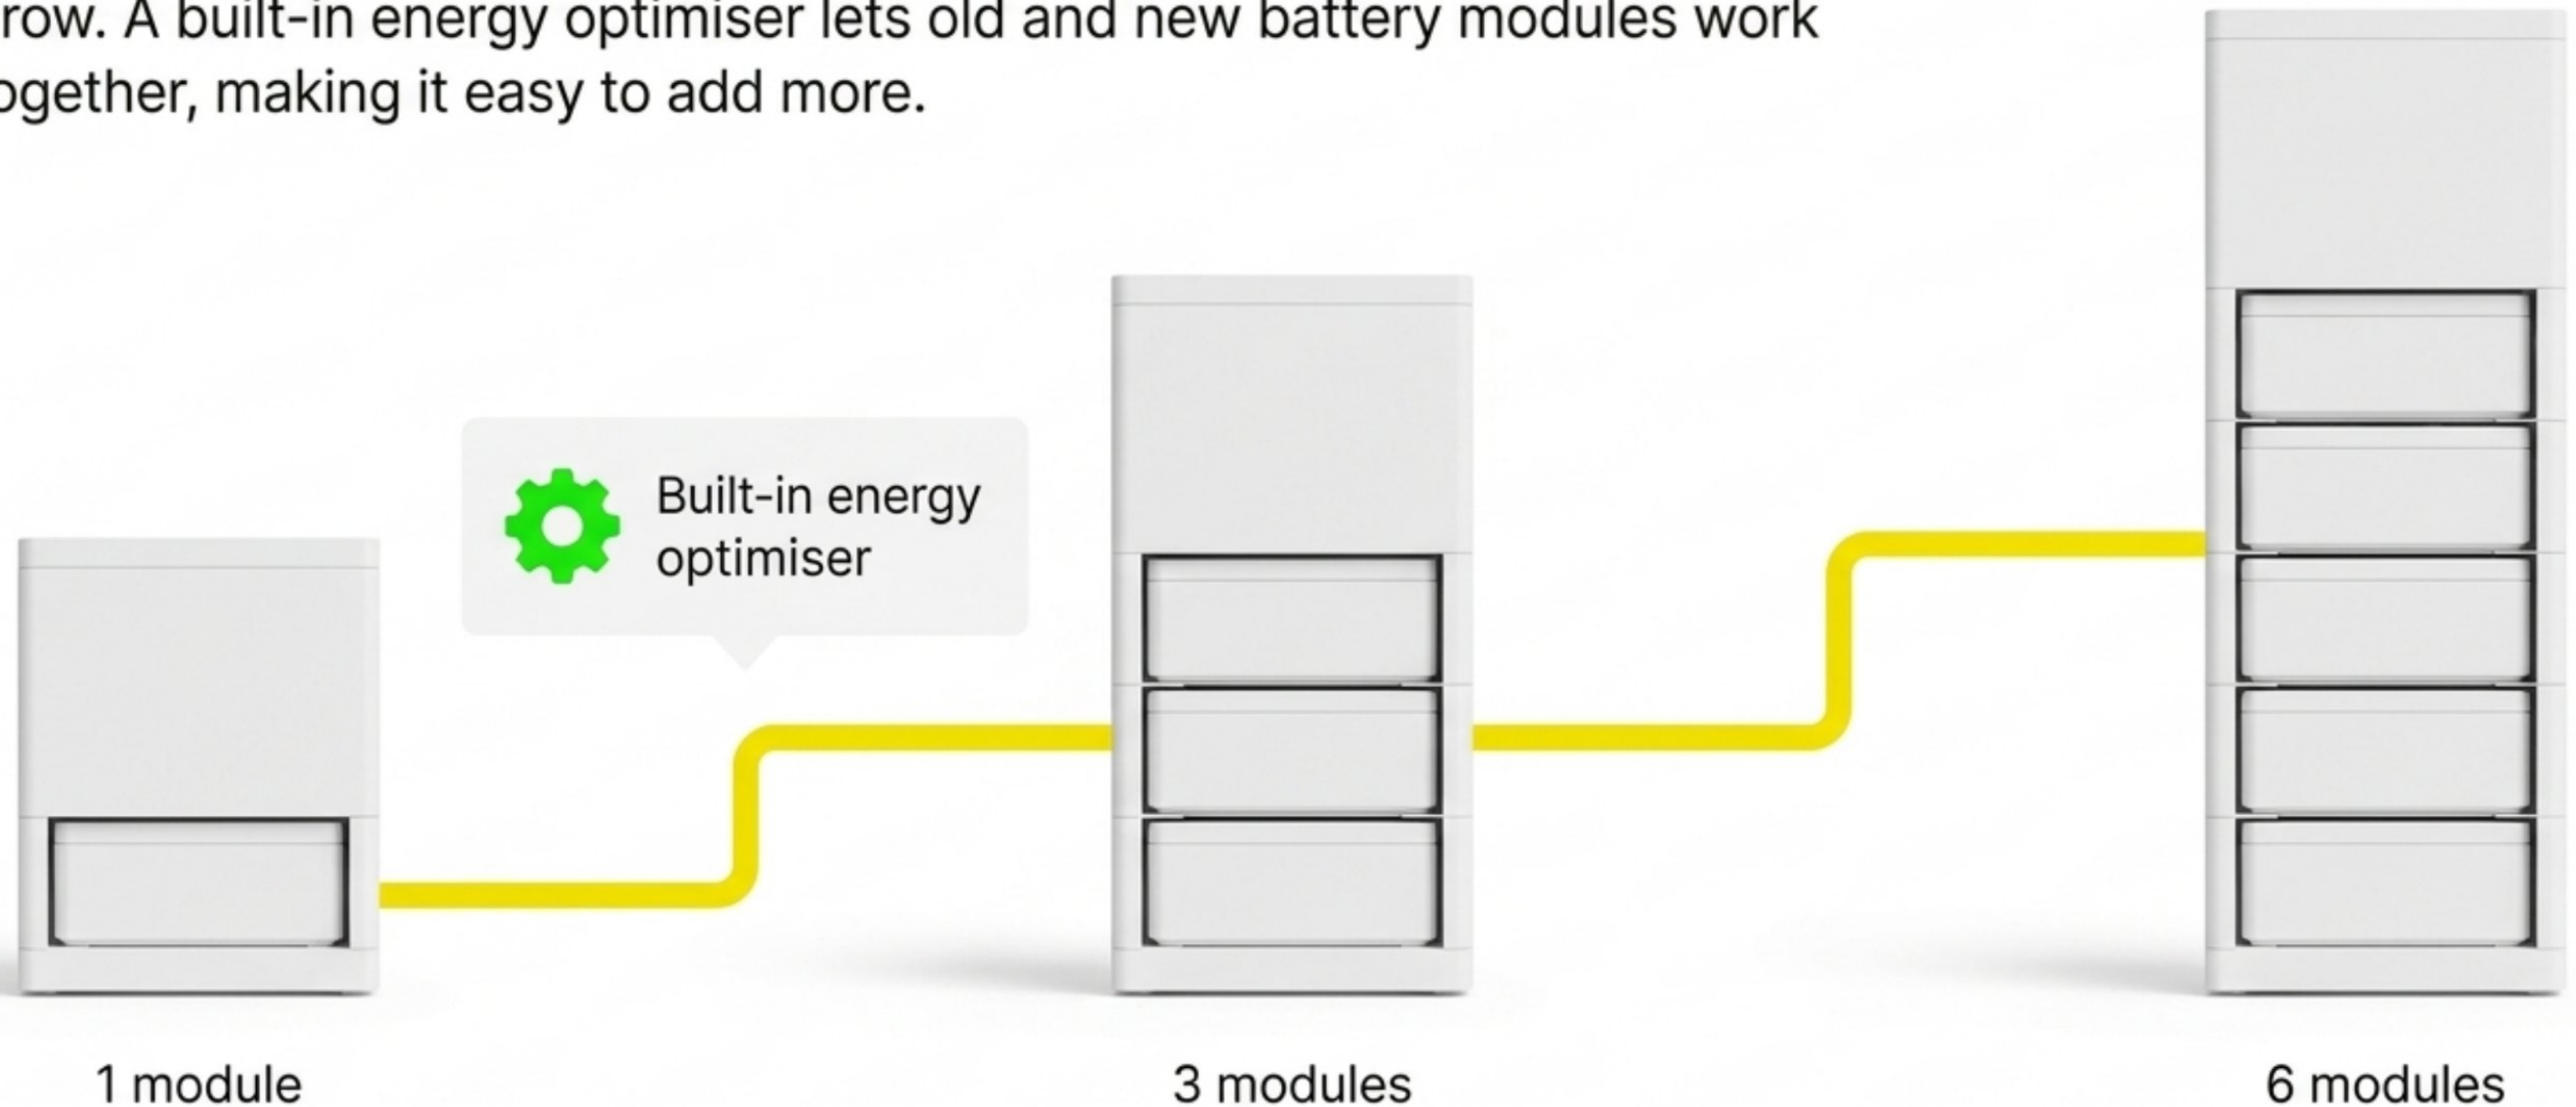

Three phase version

- 3 to 15 kW
- 3 solar inputs

Extra inputs help when panels face different ways on the roof. It suits most home electrical setups.

Start small and add more later

You can start with one battery module and add more later as your needs grow. A built-in energy optimiser lets old and new battery modules work together, making it easy to add more.

Built for the outdoors and kept safe

The battery is LFP, a stable battery type,
with built-in protection.

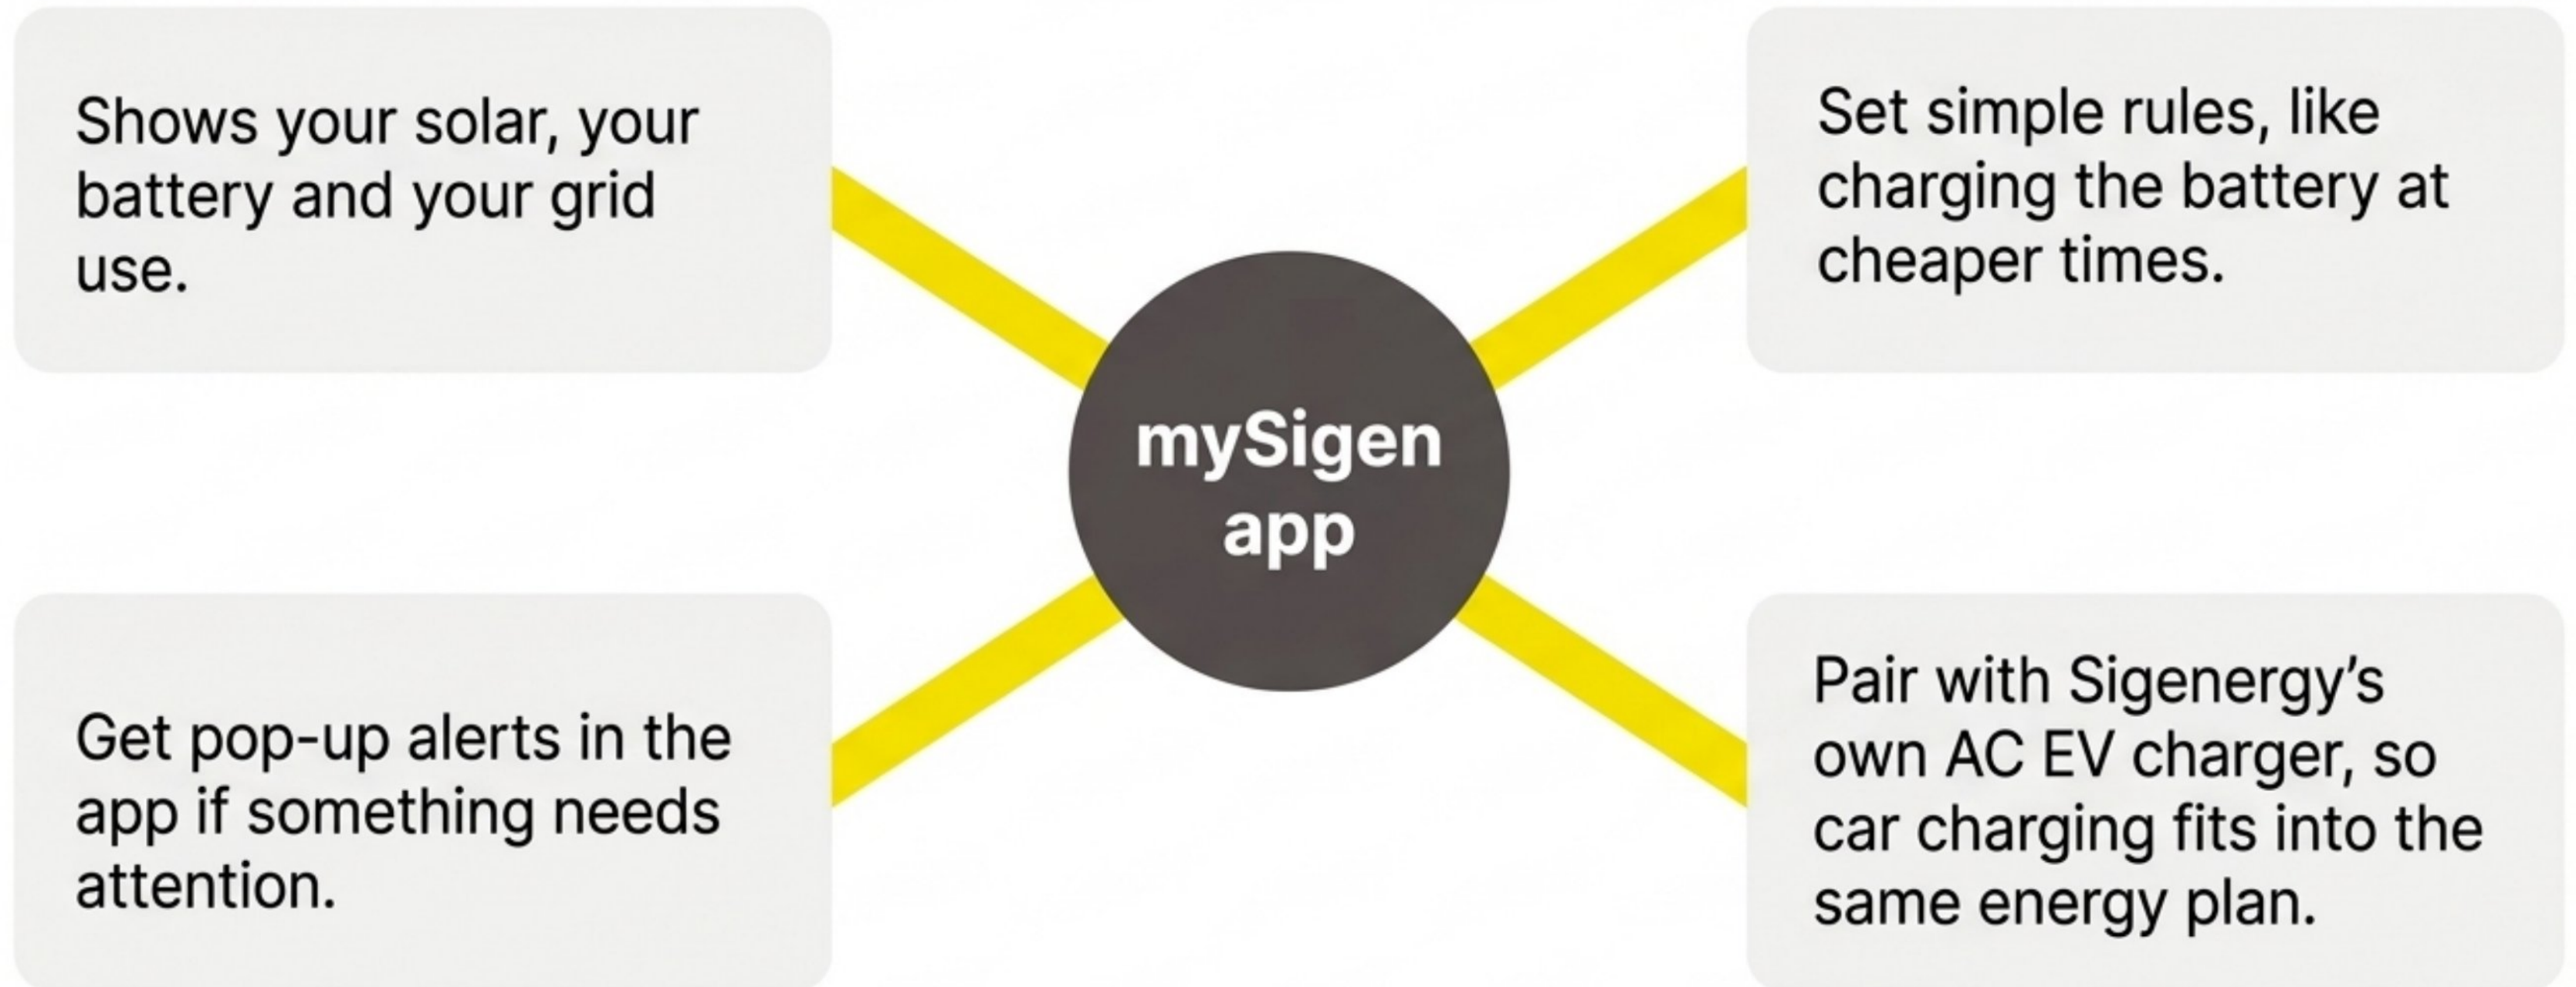

Rated IP66. Dust tight
and protected against
strong jets of water.

Can stand on the
floor or hang on a
wall.

Plan the day around your own routine

The mySigen app connects your home energy in one place.

How ZenSolar fits your system

Step 1: Every job starts with a free energy assessment, so the right size is chosen for your home.

Step 2: ZenSolar designs the system in house. Every job gets a structural engineer's sign-off.

Step 3: CoC and SSEG application handled for you. SSEG fees and meter costs are included in ZenSolar quotes.

Step 4: The system is installed by our team and preferred, vetted installers approved by the brands.

Inverter and battery come with a 10-year swap-out warranty.
